

PROJECT "E.L.F.O."

<http://www.wutel.net/elfo>

"Plug and play" solutions with solar energy, in order to produce and have available free, eco and free electricity for everyone in any part of the world.

This project was born with the aim of making the use of solar energy for the self-production of electricity from the sun increasingly accessible and accessible to everyone.

The photovoltaic systems of the "E.L.F.O." project they have been designed and built so that they can be connected and used immediately with simplicity, without having to use tools and tools or specific technical skills / knowledge.

The use of these small solar power generating units is a concrete response to the need to assert the right of all to the free and free access to electricity from renewable and clean sources, anywhere in the world.

The idea of creating these small complete photovoltaic systems has also been conceived with the aim of having weights and dimensions as small as possible, so that they can be inserted into bags and suitcases should they be carried personally by plane, ship, train, or sent by express courier or postal service.

For more information on the "E.L.F.O." project write mail to: wutel@live.it
